

# You can help ensure that **ALL** Minnesotans have a reason to *smile!*

## *Did you know?*

- » Minnesota ranks 49th out of 50 states for reimbursement rates of children needing dental care.
- » Nearly six in ten children from low income families are not receiving the dental care they need.
- » Despite incremental investments in reimbursement rates for pediatric dental care, the cost of care has greatly outpaced reimbursement with Medicaid rates for

pediatric dental care decreasing by 41.3% in Minnesota between 2003 and 2013.

- » Over the past ten years the trends have worsened. Access to funding is the single greatest factor in the decline in dental care for low-income families.
- » You have the power to effect positive change for your neighbors in need.
